Data Intake Report

Name: ML Flask Deployment
Report date: 11 March 2026
Internship Batch:LISUM51:04 NOV 25 -04 FEB 2025
Version:1.0
Data intake by:Julius Kithome
Data intake reviewer:Data Glacier
Data storage location: https://github.com/juliusmuthui015-sketch/ML-Flask-Deployment

Tabular data details:

Total number of observations	5
Total number of files	1
Total number of features	1
Base format of the file	.csv
Size of the data	1KB

Observations = dataset rows
Features= dataset columns
Files = number of datasets used

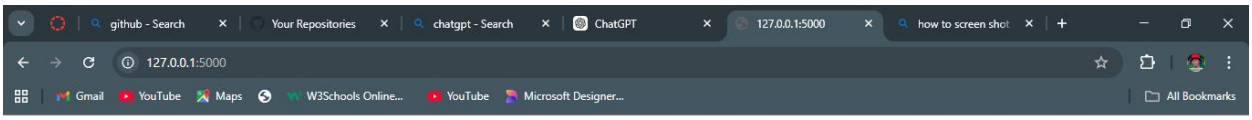
I used this toy data

X = [[1],[2],[3],[4],[5]]
y = [2,4,6,8,10]

The dataset was checked for duplicate values before training the model. Duplicate entries were identified using Python and removed to ensure data quality. Since the dataset is a simple toy dataset, no duplicate records were found.

Assumptions

The dataset used for this project is a simple toy dataset created for demonstration purposes. It assumes a linear relationship between the input variable and the output variable. The data is clean, structured, and does not contain missing values.



Machine Learning Model Deployment using Flask
